1. Introduction:
    1.1 User Manual Use Case
    1.2 Project Aim
    1.3 Target Audience
2. Software Requirements
3. Definitions
4. Functionality for Students
5. Functionality for Vendor
6. Functionality for Delivery Personnel

1. Introduction:

1.1 User Manual Use Case:

This user manual enables every new user to skim through the wide range of functionalities offered by our software. Our user manual is an easy-to-read, and easy-to-understand read-only text, which provides clear instructions to navigate through the software. This text compilation of simple instructions thus helps to elevate the overall user experience and performance of the software. The user manual is created in such a way that it provides an easy-to-follow solution for any potential challenge that could be encountered by a user while operating the software.

1.2 Project Aim:

In this fast-paced era of digital transformation, it has become essential to streamline everyday activities through technology in order to enhance efficiency, convenience, and accessibility. As a result, the proposed software aims to revolutionize the food ordering experience within a campus environment by providing a centralized and user-friendly digital platform. It is often observed that students face inconvenience in ordering food due to long queues, lack of menu visibility, and inefficient coordination between vendors and delivery personnel. This system seeks to eliminate such challenges by enabling students to browse menus, place orders, and track their food in real-time through a single interface. For vendors, the platform simplifies order management by allowing them to digitally update menus, accept or reject orders, and monitor ongoing requests efficiently. Additionally, delivery personnel are integrated into the system to ensure smooth and timely delivery of orders, with features to manage assigned deliveries and update order status dynamically. By incorporating multiple user roles—students, vendors, and delivery agents—the system ensures seamless communication and coordination among all stakeholders.

This digital solution not only reduces waiting time and manual effort but also enhances transparency and accuracy in the ordering process. Ultimately, the aim of this project is to create a reliable, efficient, and scalable campus food-ordering ecosystem that improves user experience and optimizes operational workflow for all participants.

1.3 Intended Audience:

As evident from the project aim, the primary target audience of this software consists of students, campus food vendors, and delivery personnel. Students can conveniently browse menus, place orders, and track their food in real-time through an intuitive interface. Vendors are enabled to efficiently manage their offerings by updating menus, handling incoming orders, and monitoring preparation status digitally. Delivery personnel benefit from a streamlined system that allows them to view assigned deliveries, manage pickups, and update delivery status seamlessly.

Thus, the platform caters to all key participants involved in the campus food-ordering ecosystem, ensuring ease of use, efficient coordination, and an enhanced overall experience for each user group.

2. Software Requirements:

This application needs a web browser such as Google Chrome, Microsoft Edge, and similar software for it to run. The software and its dependencies may require an operating system that runs on a 64-bit architecture.

The software can be accessed by typing this campusfoodorderingsystem-production.up.railway.app link on any of the search engines as mentioned above

3. Definitions:

3.1. User:

The term "user" refers to any individual interacting with the software, including students, vendors, and delivery personnel, who access the platform through authentication interfaces such as login and registration.

3.2. Student:

A student is a registered user who can browse vendors, view food items, add items to the cart, place orders, and track order details through interfaces such as *vendors list, cart, checkout, orders,* and *order history*.

3.3. Vendor:

A vendor is a registered food provider who manages food services within the campus. Vendors can access their dashboard to handle incoming orders and manage their operations.

3.4. Delivery Personnel:
Delivery personnel are users responsible for delivering food orders. They can view *available orders*, accept them, and manage delivery updates through their dashboard.

3.5. Vendor List:
A section where students can view all available vendors on the platform and select a vendor to explore their menu and details.

3.6. Vendor Details:
An interface that displays detailed information about a specific vendor, including available food items for ordering.

3.7. Cart:
A feature that allows students to temporarily store selected food items before proceeding to checkout.

3.8. Checkout:
The process through which a student confirms their order, reviews selected items, and places the final order.

3.9. Order:
An order is a confirmed request made by a student for food items from a vendor through the system.

3.10. Order Details:
A section where students can view complete information about a specific order, including items ordered, total cost, and current status.

3.11. Orders:
A section displaying all active or ongoing orders placed by the student.

3.12. Order History:
A record of all previously placed and completed orders by the student.

3.13. Order Status:
Represents the current stage of an order, such as "Pending", "Accepted", "Preparing", "Out for Delivery", and "Delivered".

3.14. Available Orders:
A section in the delivery personnel interface where unassigned or ready-to-deliver orders are listed for acceptance.

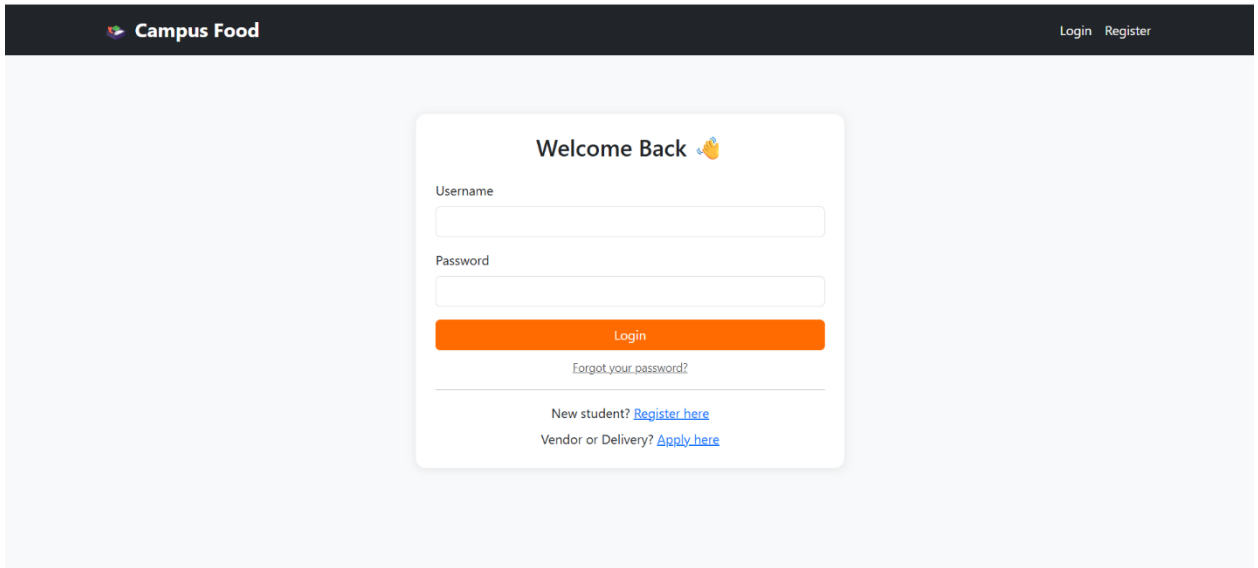
3.15. Dashboard:
A central interface for each user role (student, vendor, delivery personnel) that provides access to relevant functionalities and system information.

3.16. Authentication System:
Includes features such as *login, registration, password reset, and change password*, allowing secure access to the platform.

3.17. Registration (Apply):
The process through which new users create an account on the platform by providing the necessary details.

3.18. Pending Approval:
A state where newly registered users (especially vendors or delivery personnel) may require approval before gaining full access to the system.

The introductory page of our site looks like:



Login/Register Page

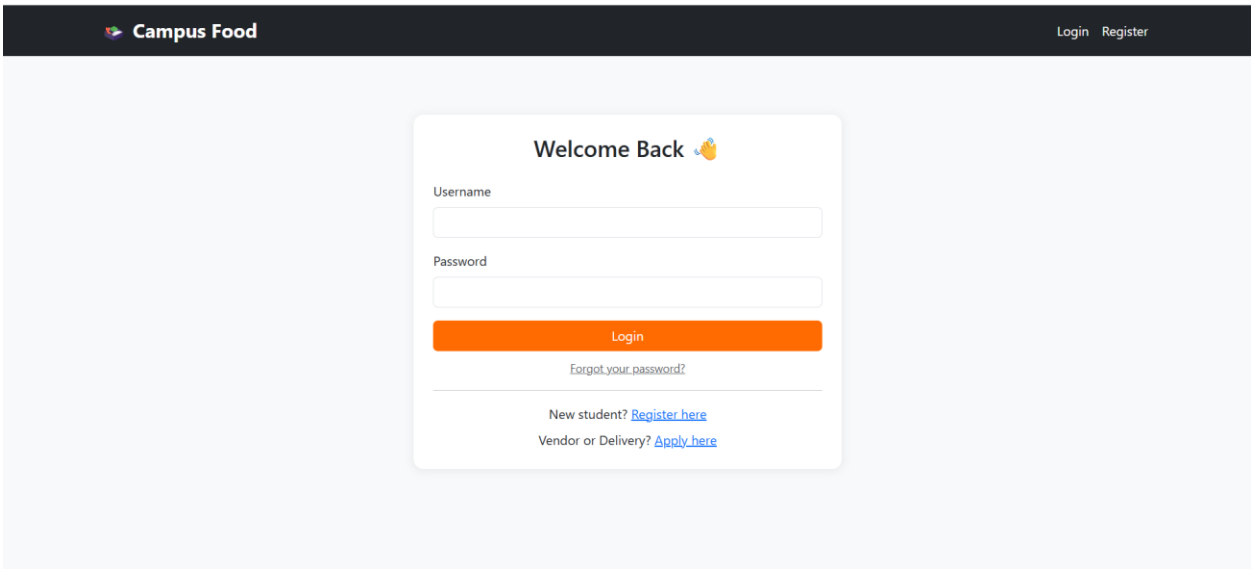
This software has been carefully built, keeping in mind all the possible edge cases, along with an easy-to-use user-interface. Below mentioned thorough explanation of every functionality is intended at making the usage of the software a lot easier upon being used by any Layman.

4. Functionality for Students :

As a Patient, our software offers the following functionalities:

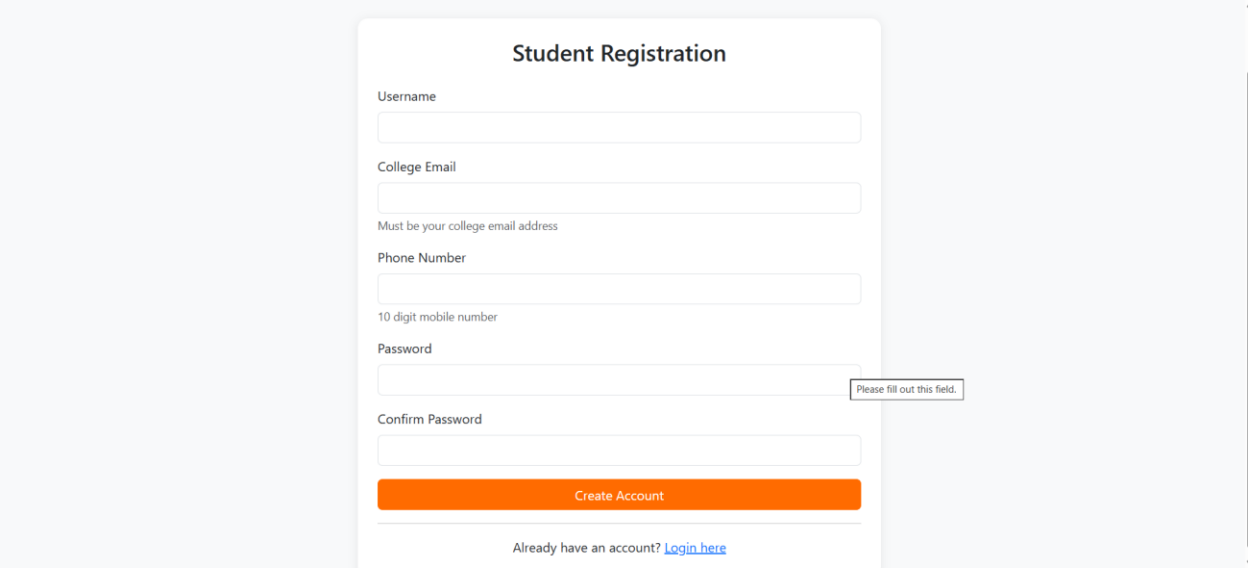
1) Register /Login:

Once the site is opened, a user has this Login/Register Page in front of him as:



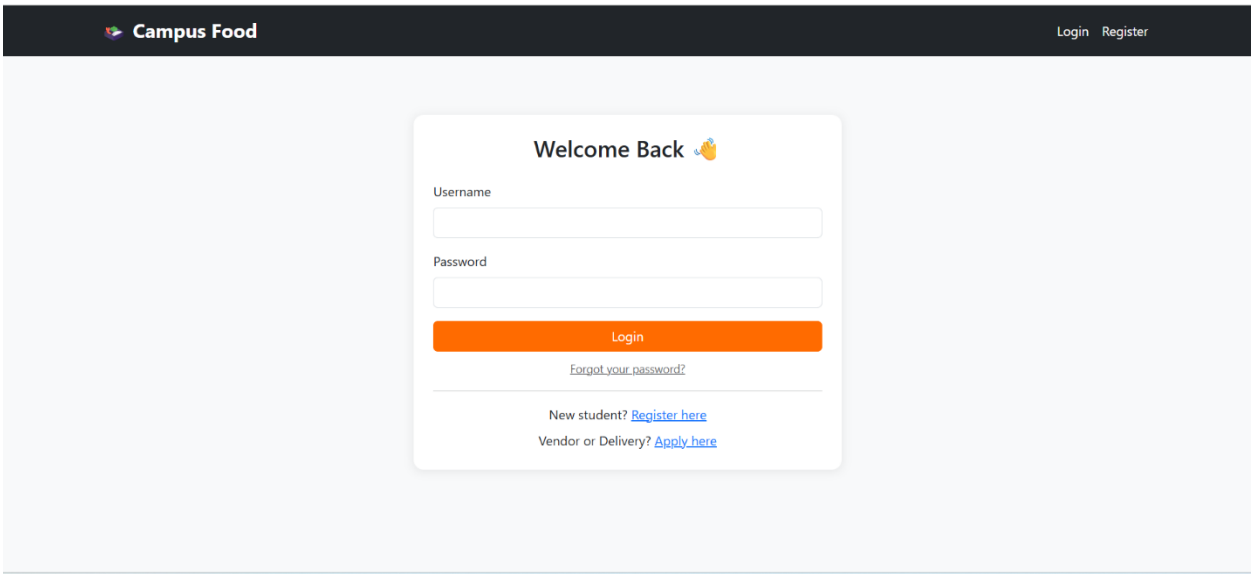
Login Page

After clicking on Register here a form appears which must be filled according to the instructions given over it to register himself successfully. The form is shown as below:



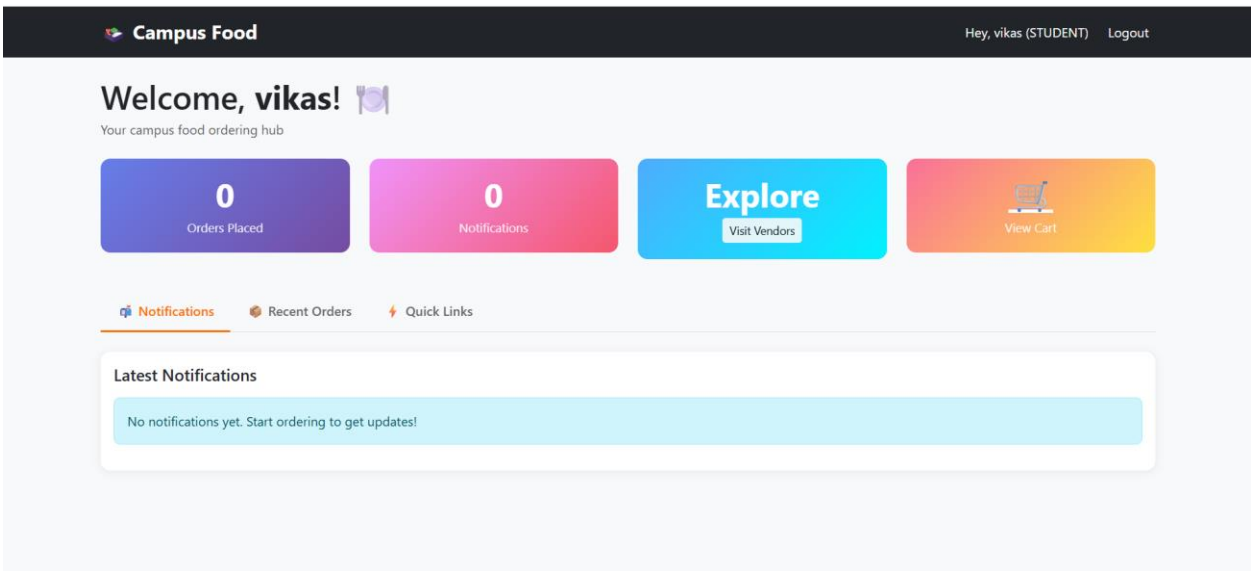
Registration page

After a successful registration, the user is again redirected to the login /register page after clicking on Create Account below the form.



Login page

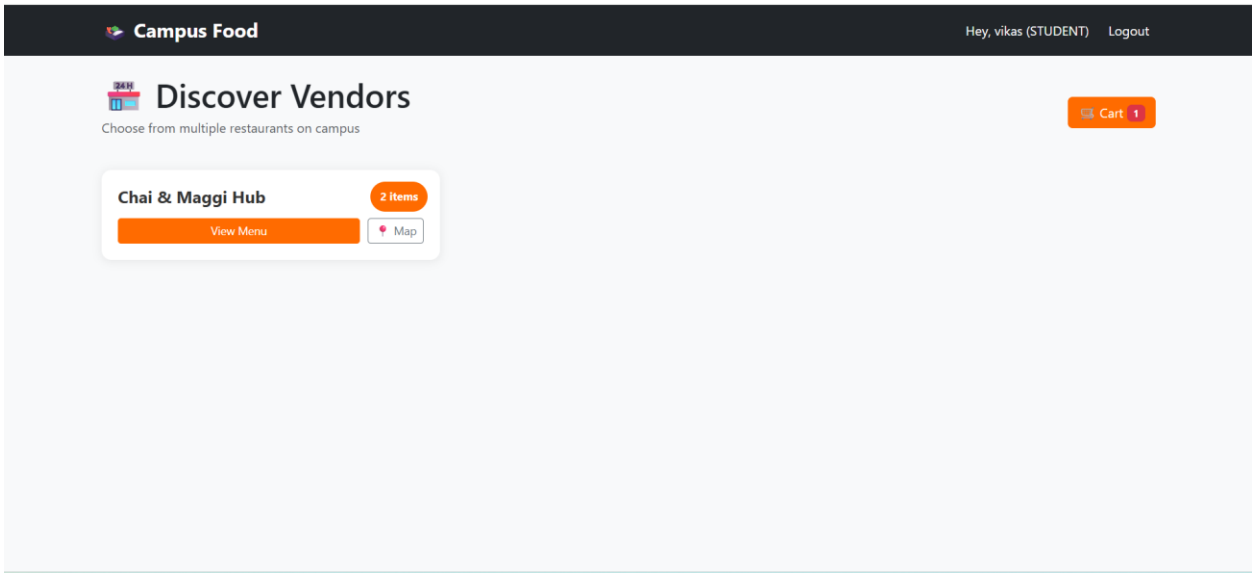
By clicking on Login button after filling the required details, user is directed to the Students' HomePage, which looks like :



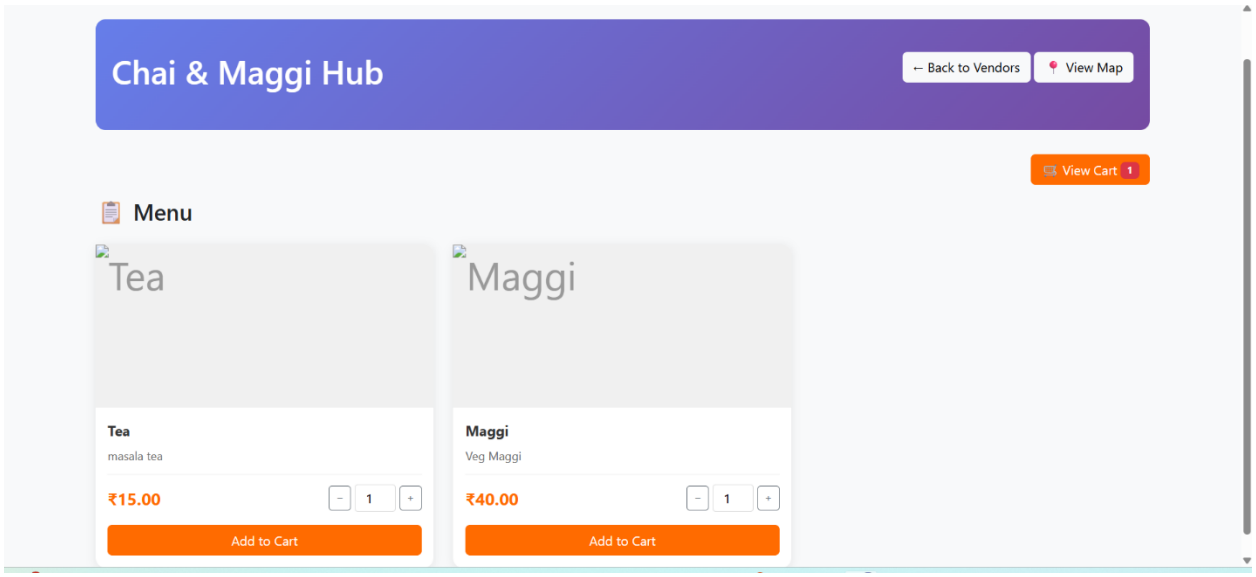
Student page

This page has various functionalities:

1. Logout: It is a button on the top right of the page which helps the user to logout from the software, takes him back to the Login/Register Page.
2. Orders Placed: It shows the total number of orders placed by the student till now, giving a quick overview of their activity on the platform.Notifications: I shows the the notification.
3. Notifications: It displays the number of notifications received by the user, such as order updates, confirmations, or important system alerts.
4. Explore: It is a button that allows the user to view vendor details. Upon clicking it, the user is redirected to the vendors list page. The user can view a vendor's menu by clicking on the View Menu and add the items by clicking on Add to Cart .

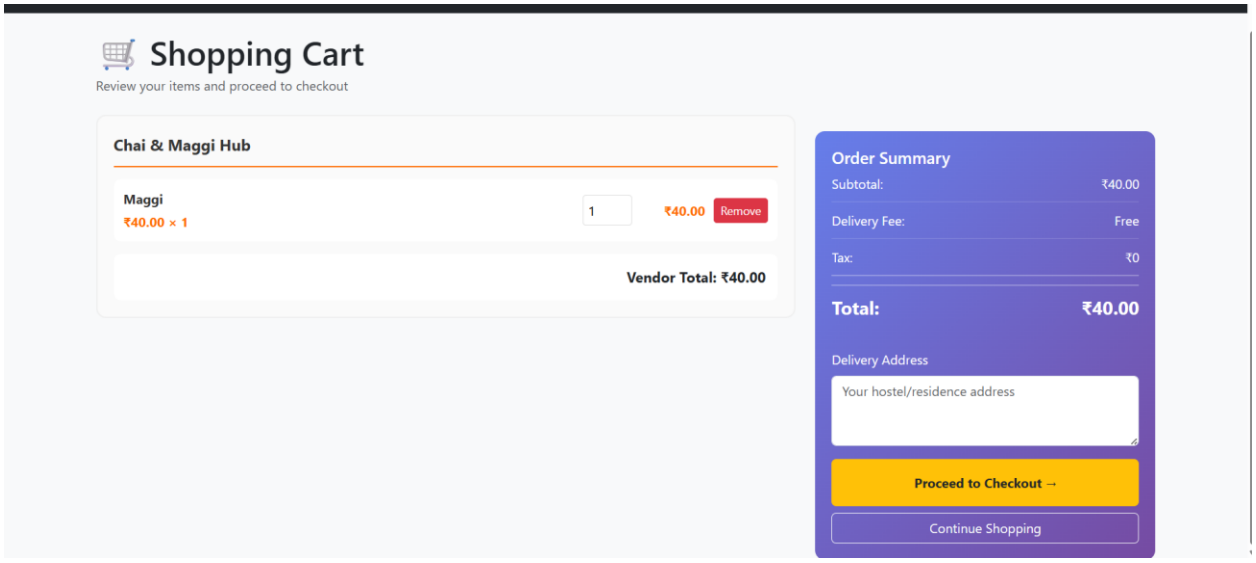


Vendor list page



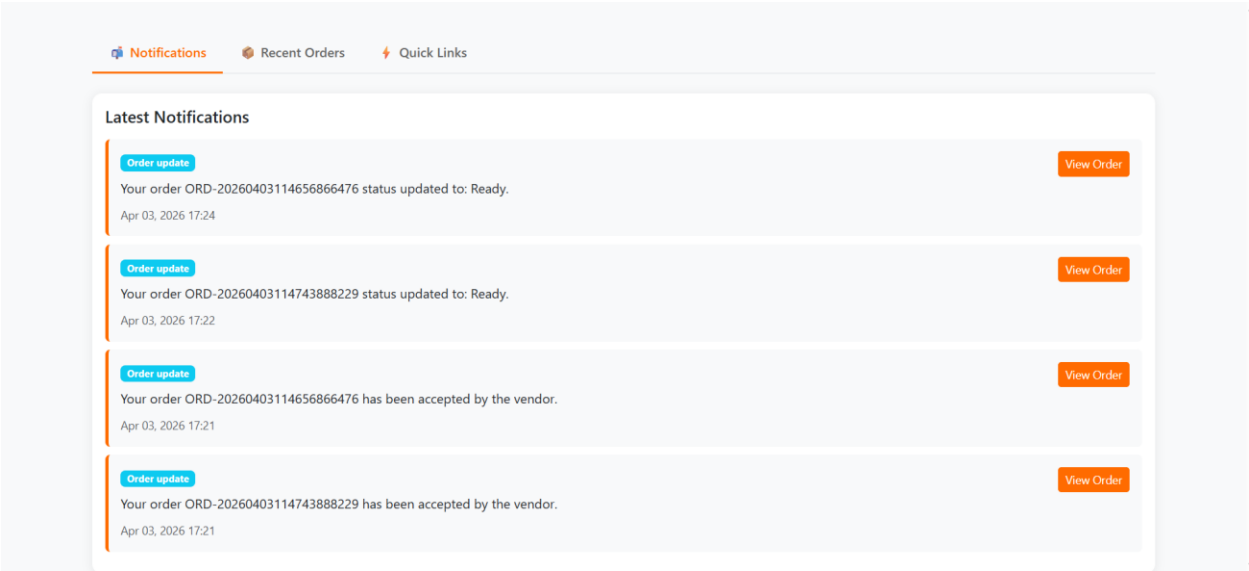
Menu page

5. View Cart: This button allows the user to access their cart, where all selected food items are listed. From here, the user can review items, modify quantities, or proceed to checkout. if needed, he can redirect to the vendors list page as well by clicking on Continue Shopping .



Shopping cart page

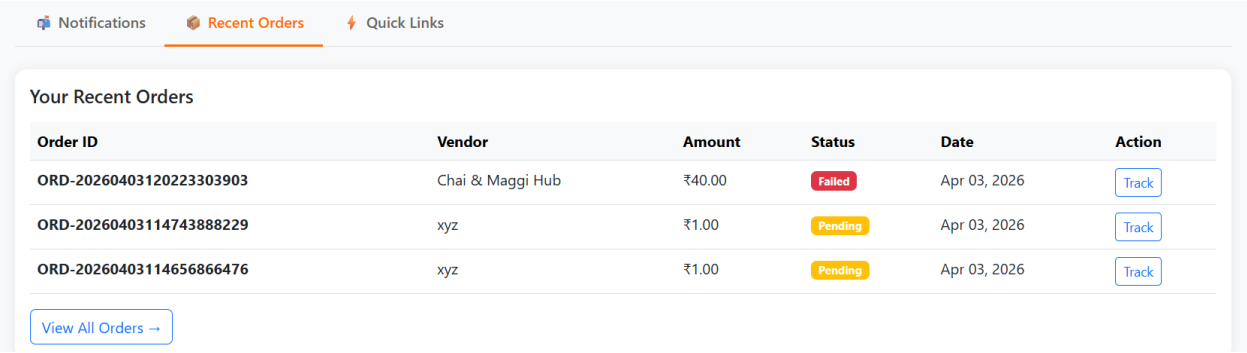
6. Notifications: This section displays recent notifications related to the user's orders and activities. It helps users stay updated with real-time information such as order status and system messages.



Notifications page

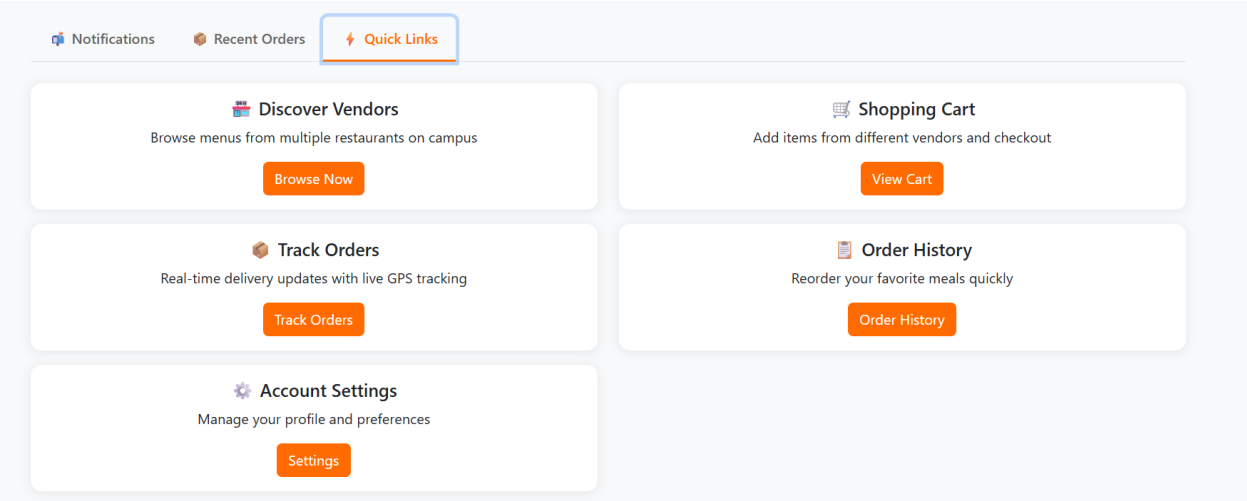
User can see the order status by clicking on

7. Recent Orders :This section displays a summary of the most recently placed orders by the student. It provides quick information such as order ID, items ordered, total amount, and current order status. By clicking on a specific order, the user can view detailed information about that order. This feature helps users easily track their latest activities without navigating to the full order history section.



Recent Orders page

8. Quick Links : This section provides shortcut access to important features of the system, allowing users to quickly navigate to frequently used functionalities.

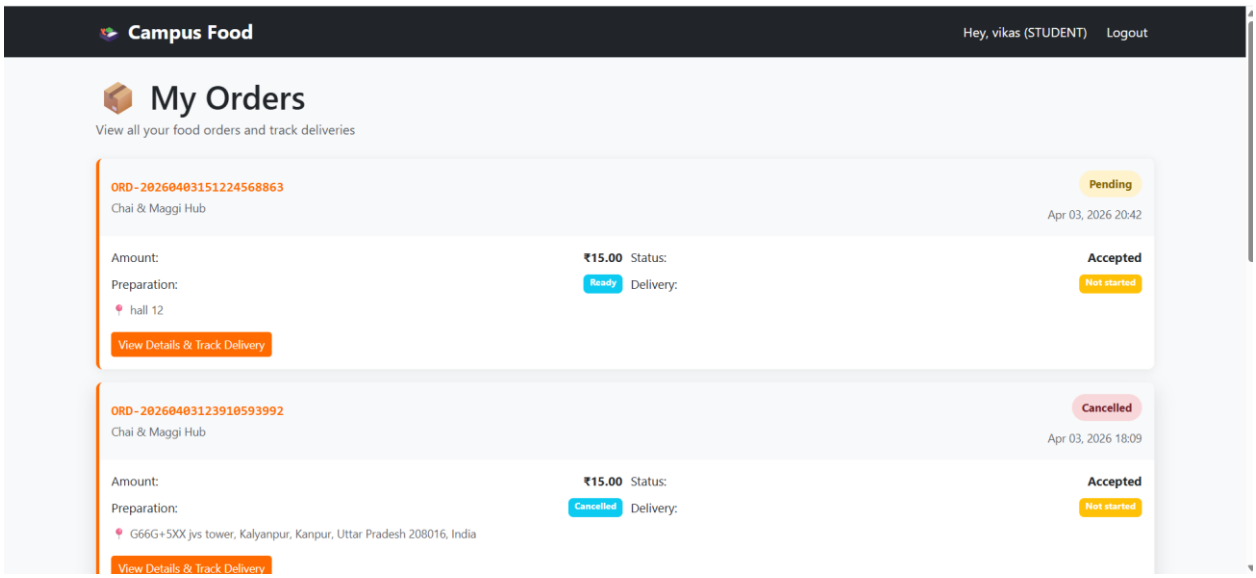


Quick links page

- Discover Vendors: This option allows users to browse menus from multiple vendors available on campus. By clicking Browse Now ,

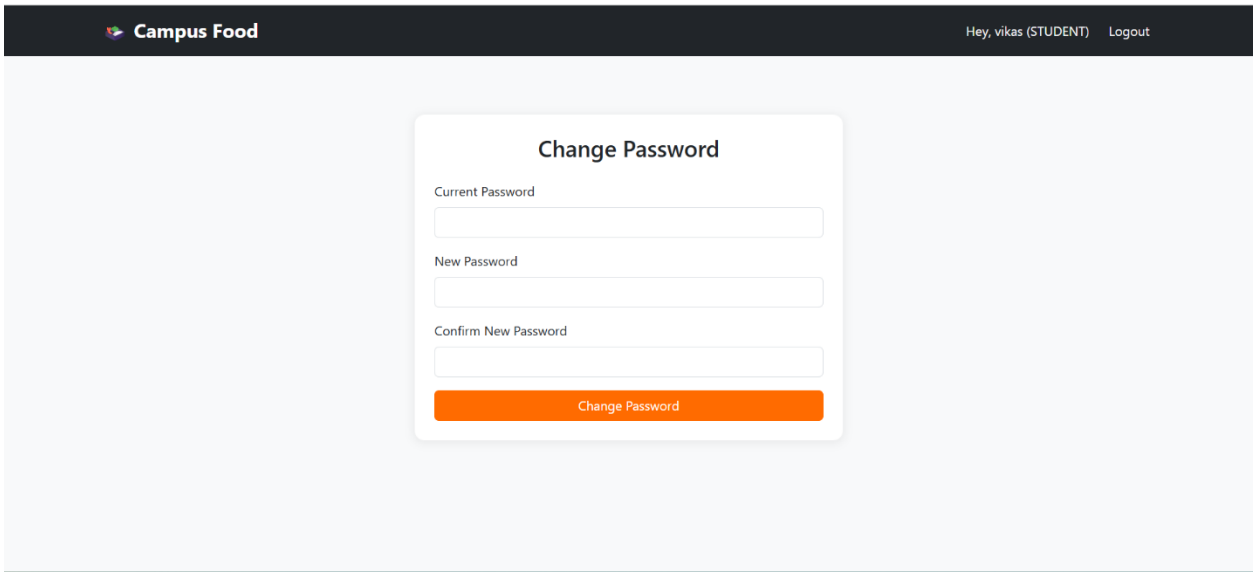
users can explore different food options and select a vendor for ordering.

- Shopping Cart: This feature enables users to view items added to their cart. Users can review selected items, update quantities, and proceed to checkout by clicking View Cart .
- Track Orders: This button Track Orders allows users to monitor the status of their ongoing orders. It provides real-time updates regarding order preparation and delivery progress.



My orders pages

- Order History: By clicking the button Order History users to view all previously placed orders. Users can quickly reorder their favorite meals or check details of past orders.
- Account Settings: This feature allows users to manage their account security. By clicking Settings, the user is redirected to the password management section, where they can change their password to ensure account safety and maintain secure access to the platform.

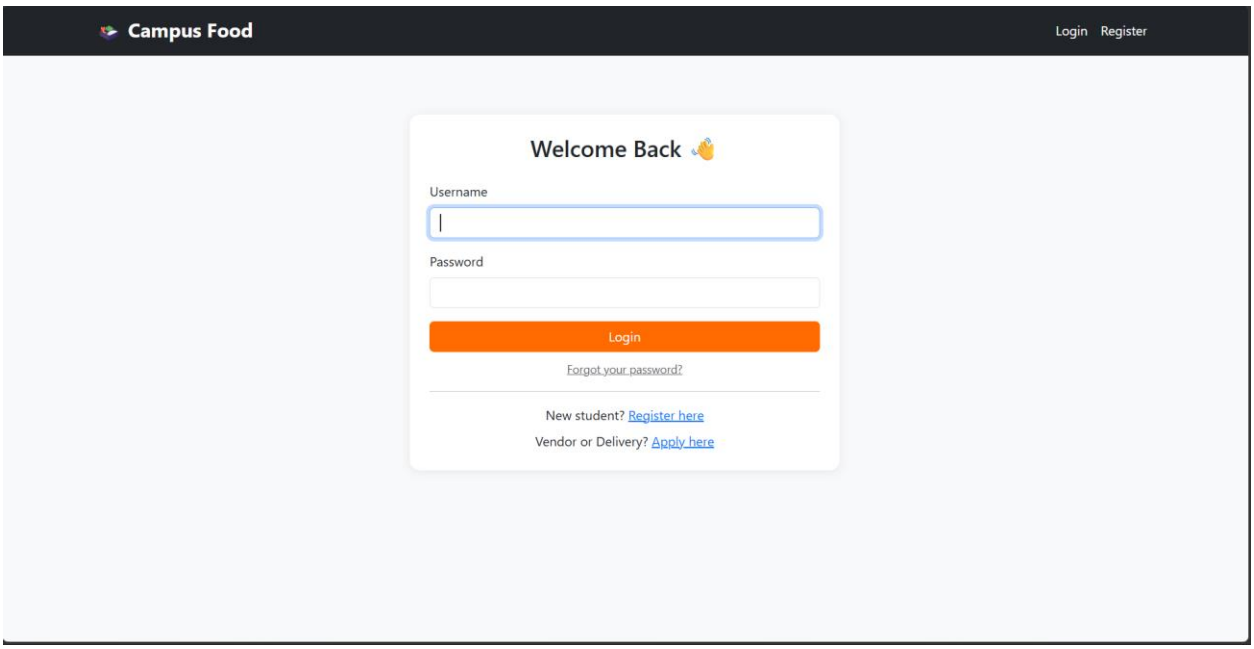


Settings page

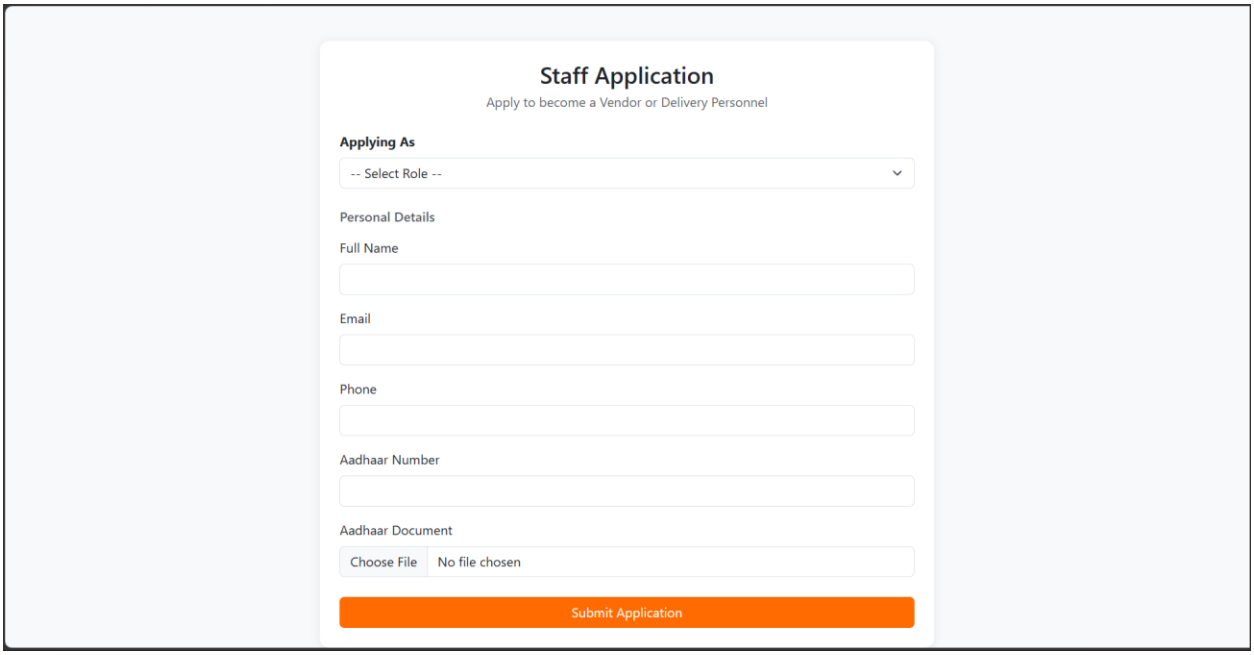
5. Functionality for Vendors :

These are the functionalities for vendors in our software:

1)Vendors or Delivery Agents have to apply from this page.

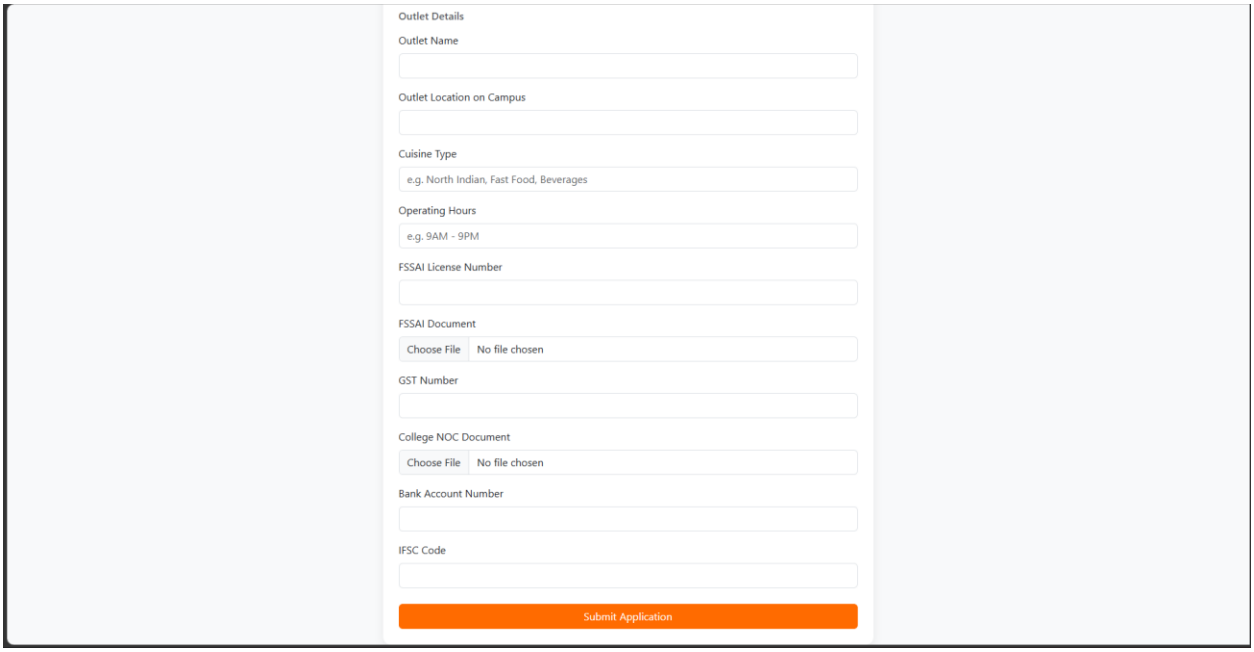


After clicking on Apply here a form appears, which has to be filled according to the instructions mentioned for a successful application as a vendor/delivery agent. The form is shown below:

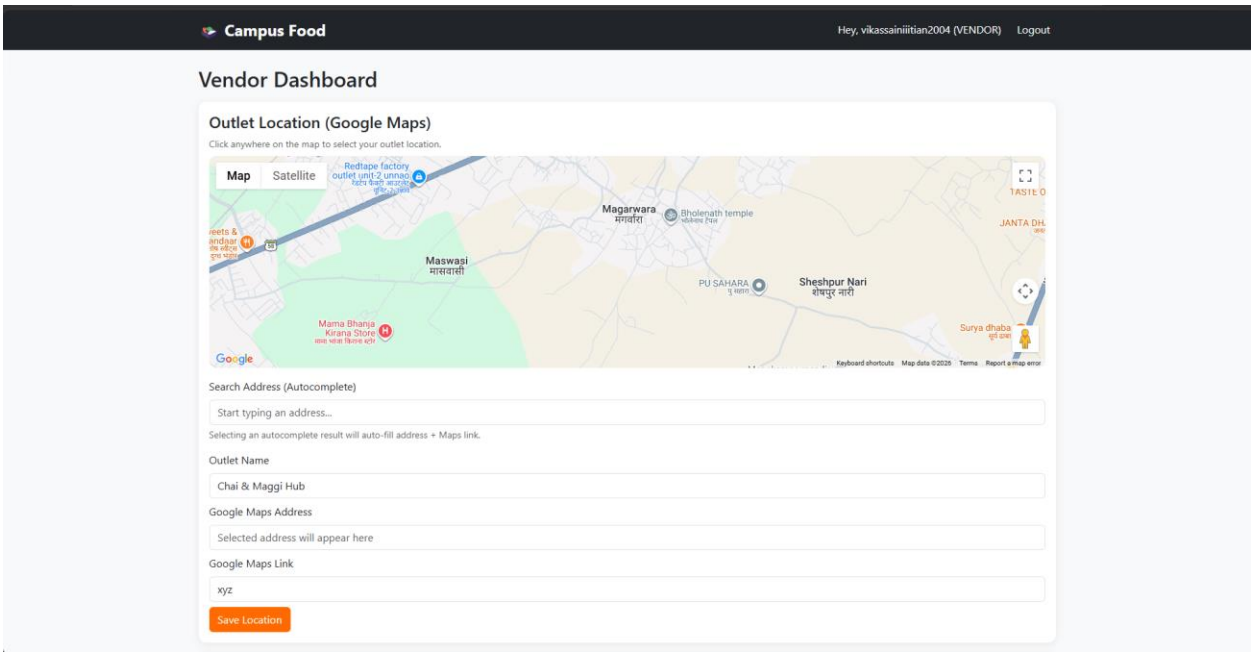


Vendors shall submit their Outlet details by clicking

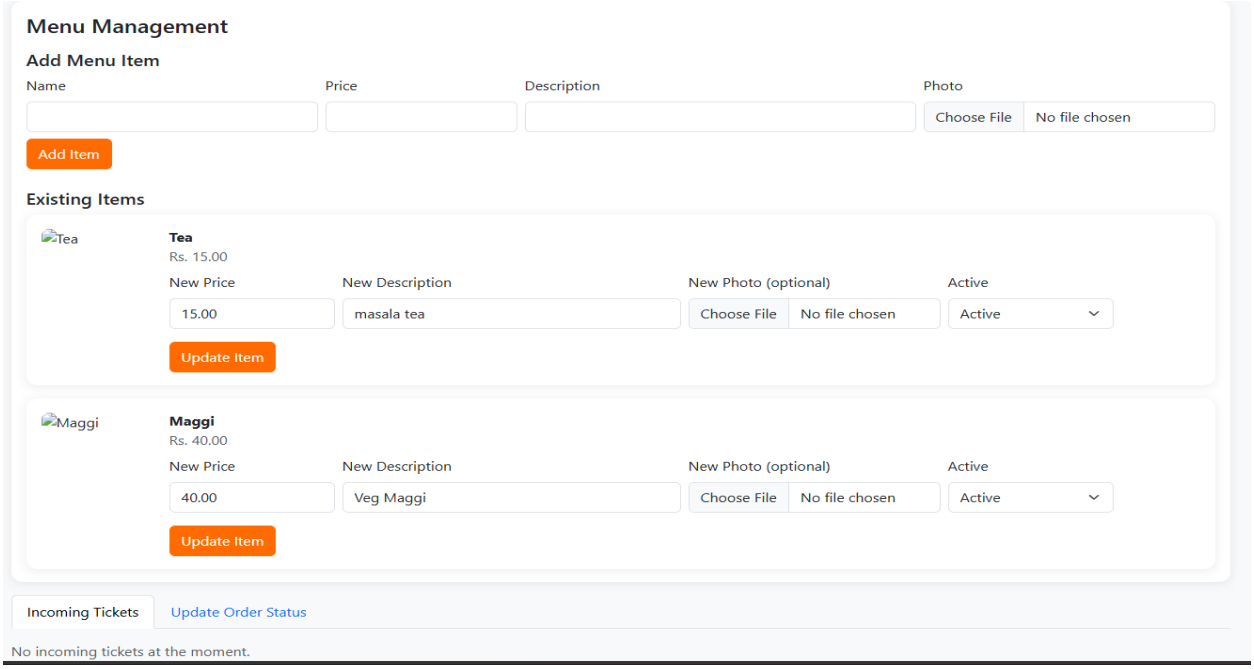
Submit Application button as shown below to complete their application



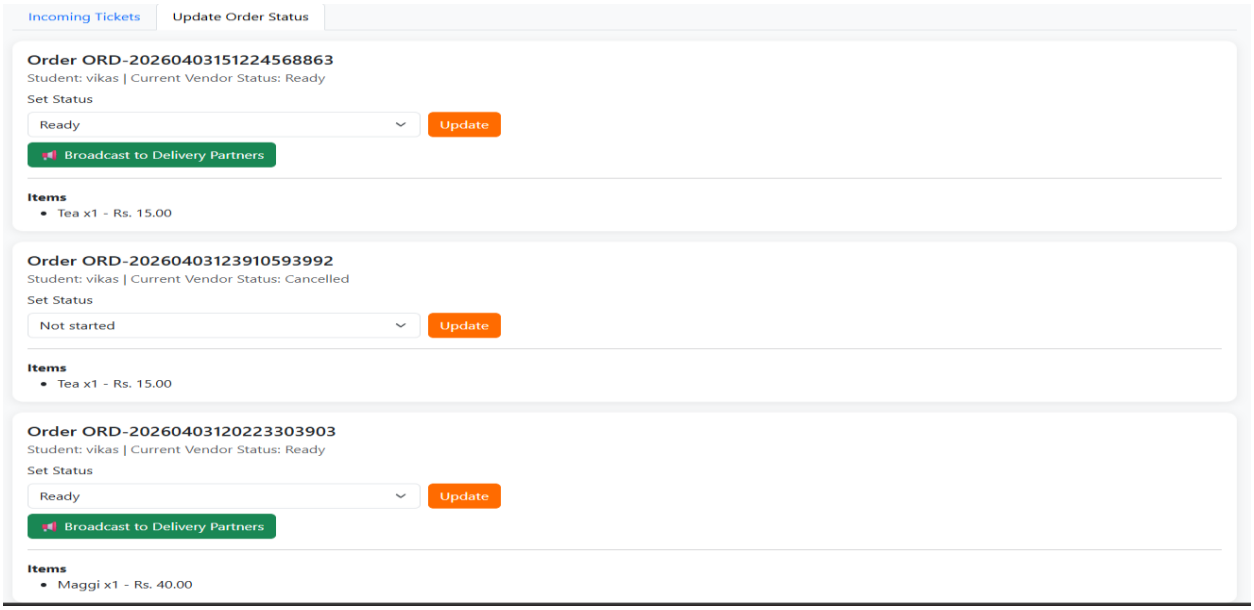
After a successful registration, the vendor is redirected to login/register page. The user can now fill the required details and click the Login button for successful login.



The Vendor can edit the menu items through this tab and also view any incoming orders. They can click on button Add Item to add new items to the menu and click on button Update Item to modify the details of existing items of menu.



Vendors can update the order status through this tab. They can click Update to change the status of the order and notify delivery personnel by clicking on the Broadcast to Delivery Partners button.

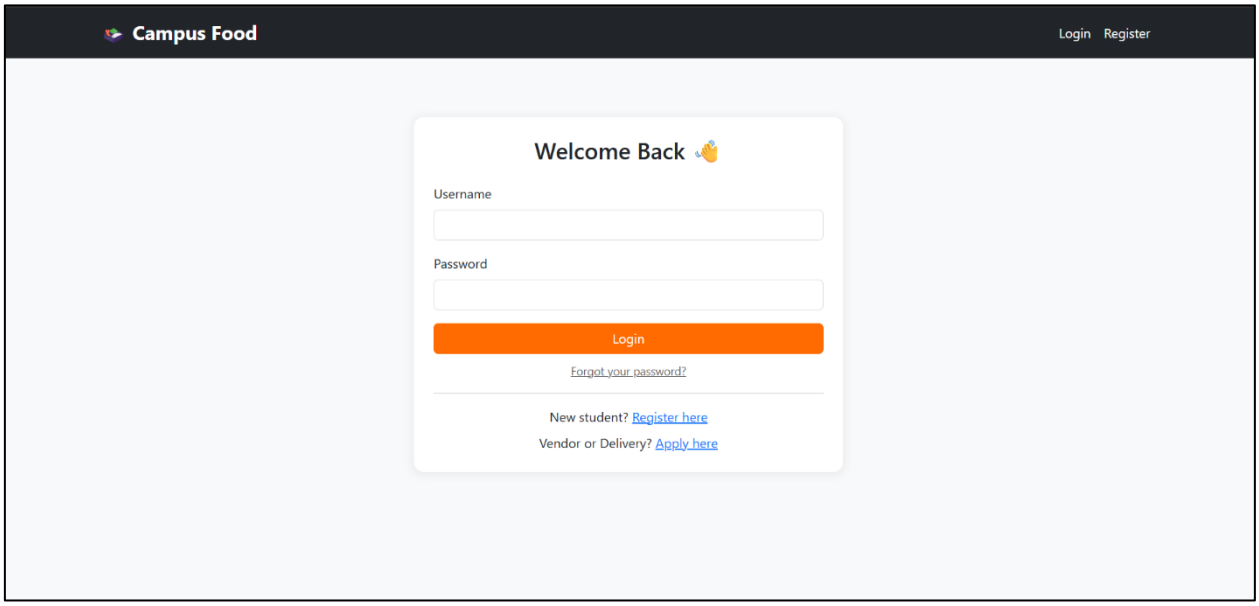


Vendors can logout by clicking on button Logout in top-right corner.

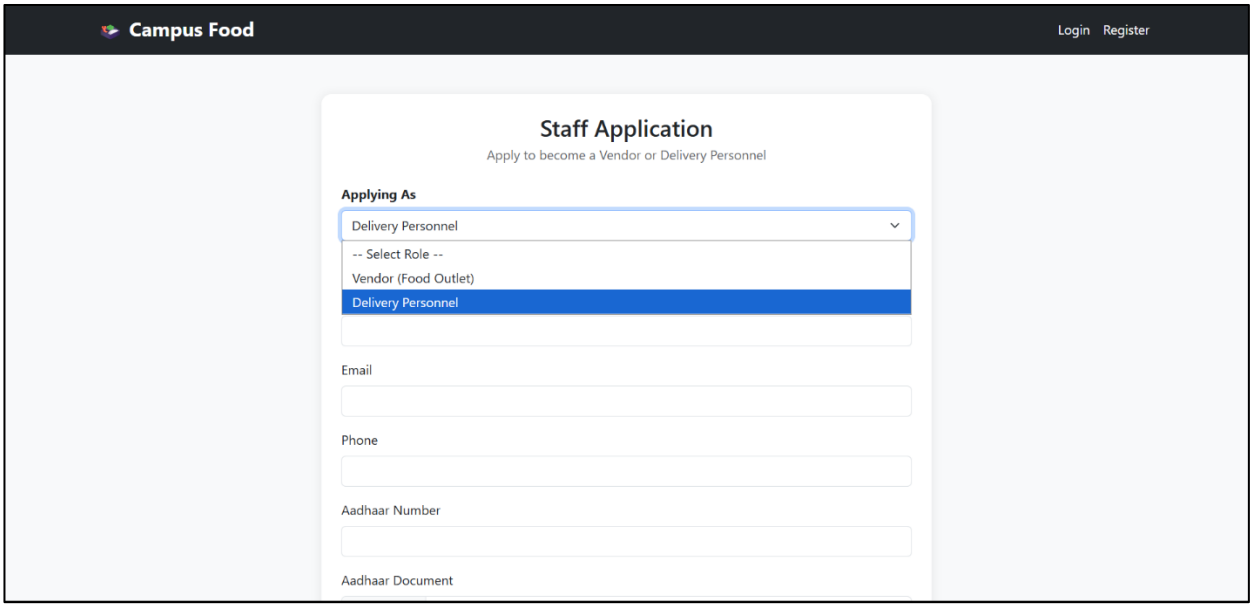
5. Functionality for Delivery Personnel:

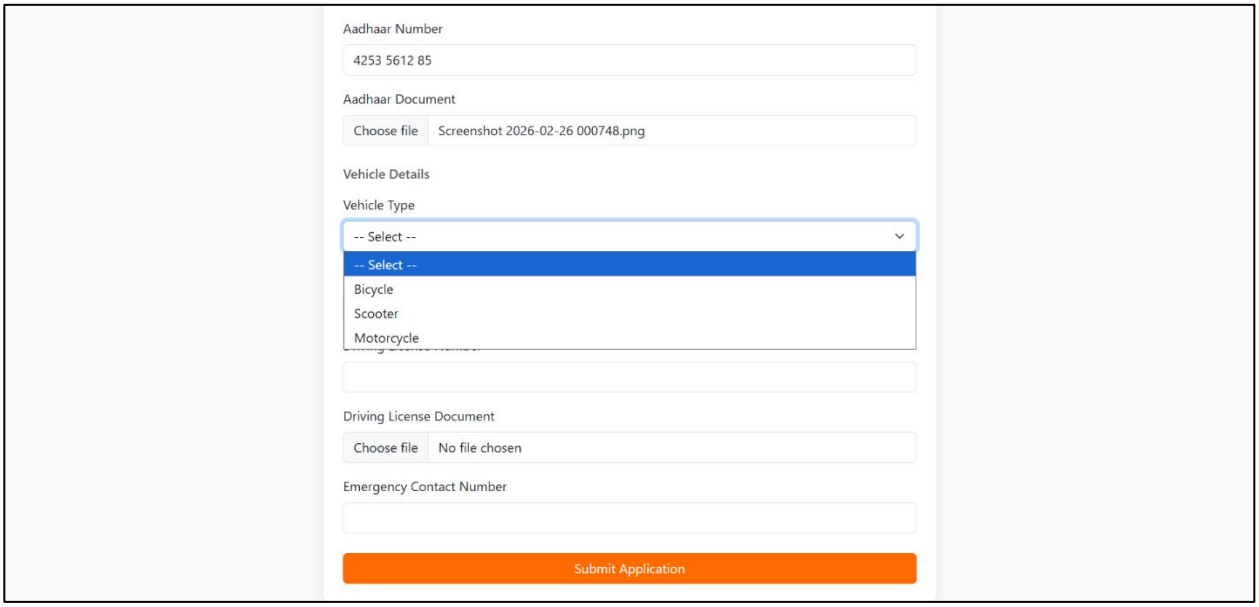
1) Register/Login as Delivery:

Once the website is open the click on Apply here if you are a new Delivery Partner. If you have already registered, enter the Username and Password.

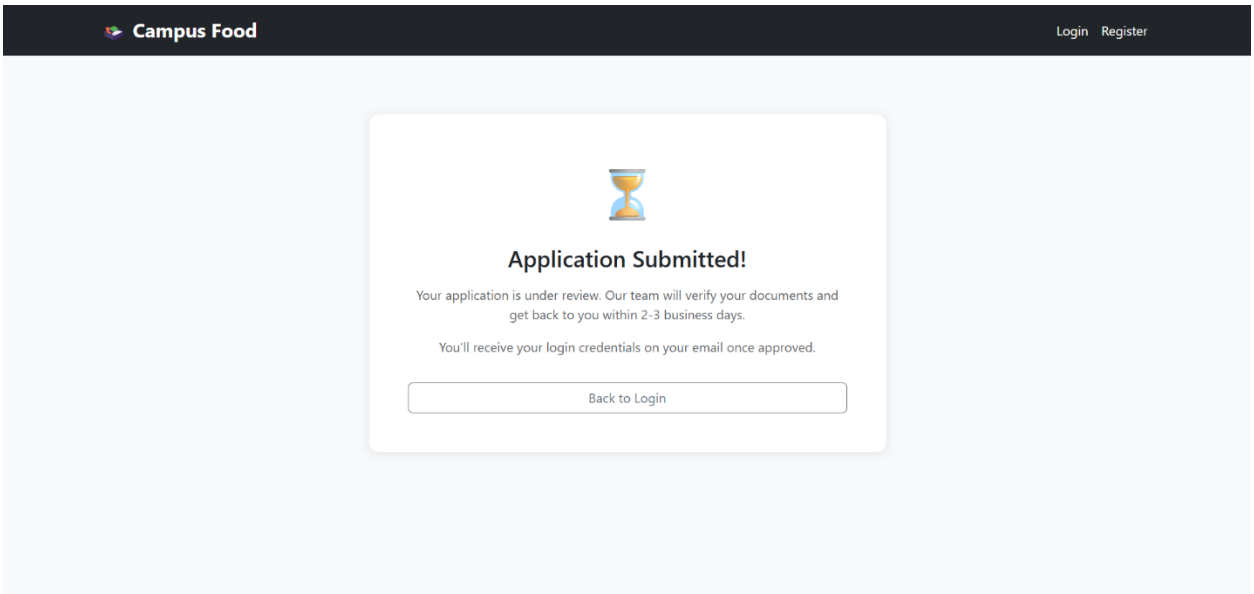


2) This page will be opened for new user. Select the type as Delivery Personnel and give the required information and documents. Then click on Submit Application.

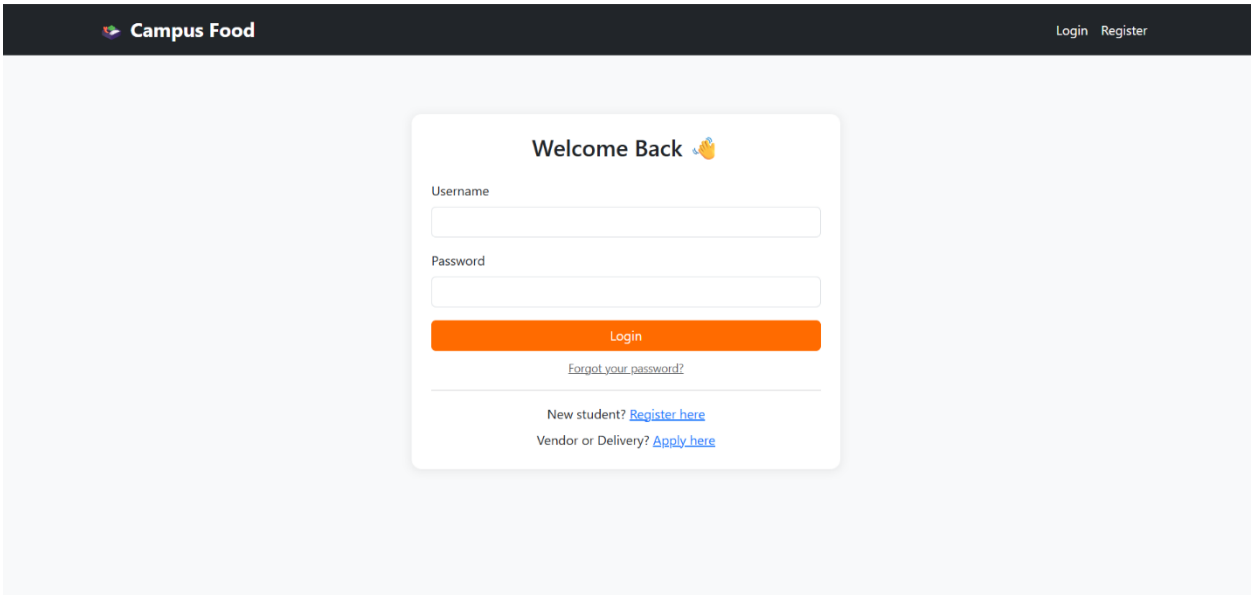




3) After that you will see the below page regarding your registration and then you will get your Username and Password on the Email ID you shared.



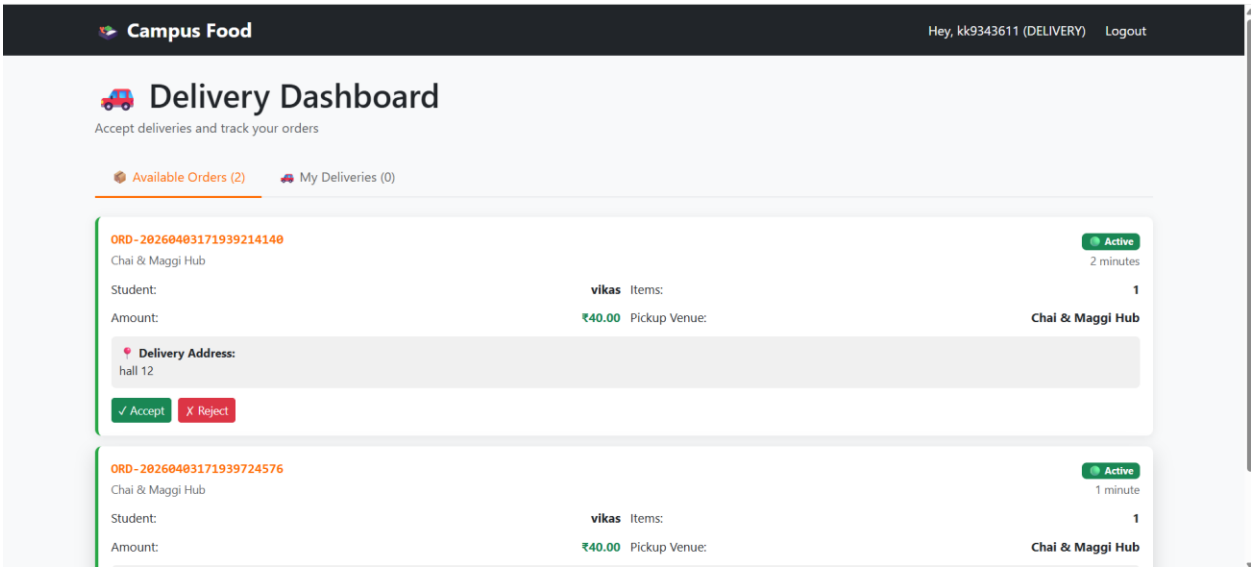
4) Click on Back to Login, you will be re-directed to the below page. Fill the Username and Password. Click on the Login button.



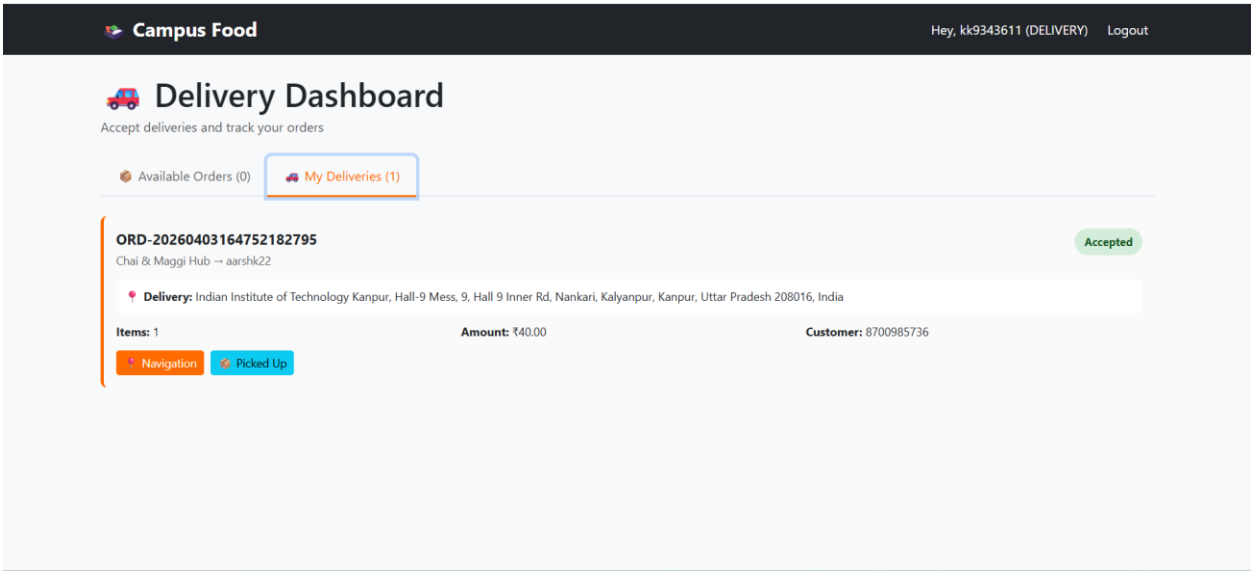
5) The following page will appear once you logged in:

Here,

on Available Orders, you can see the orders that you can accept.



On My Deliveries, you can see your deliveries that you have to do.



6) On the Delivery Dashboard, you will see the deliveries that you can Accept or Reject. You can see the payment amount and other options. You can accept as many orders as you want according to your preference.

7) After accepting any order, delivery personnel will able to mark order picked up using

button , give live delivery updates using button and mark delivered.
